

# Intro to SQL

---

For this assignment, you'll need a few things:

1. FireFox and SQLite manager
2. [This tutorial](#) if you need help.
3. [This dataset](#).

You will need to do the following:

- Import the data and set up the table
- The fields are:

| column         | data_type |
|----------------|-----------|
| Case #         | Text      |
| Incident Code  | Text      |
| Reported       | DateTime  |
| Case Status    | Text      |
| Start Occurred | DateTime  |
| End Occurred   | DateTime  |
| Building       | Text      |
| Location       | Text      |
| Stolen         | Number    |
| Damaged        | Number    |
| Description    | Text      |
| year           | Text      |

To get full credit for this assignment, you must submit a text file that includes the SQL you wrote to answer the following questions, along with the answers to these questions.

- How many calls went to UNLPPD in 2011, 2012, 2013, 2014, 2015 and 2016?
- How many minor in possession incidents are there each year?
- What is the most common call to UNLPPD from 2011-2016?

- What is the most common call in 2016?
- What building on campus received the most calls to UNLPD?

Remember: To get credit, your file must include the SQL AND the answers.
